

(a) dark input (shown with $\gamma=0.4$)

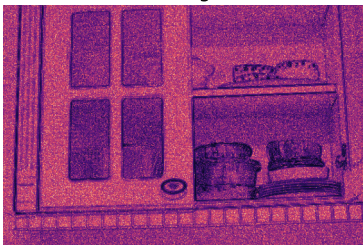

(b) local mean = signal

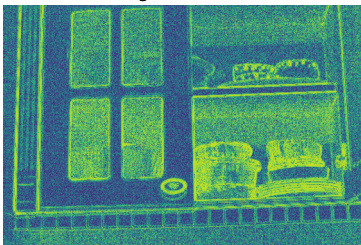

(c) $|\text{gray} - \text{mean}| = \text{noise}$

(d) SNR (log scale)

(e) weight: rank (used)

(f) weight: min-max (rejected)

(g) $1 + \alpha(1 - \text{SNR}_{\text{norm}})$, $\alpha = 1$

min-max
rank

min-max: 93% of
pixels > 1.9
